

# Copilot for Security PoC

Prepare to defend at machine speed and scale

## Readiness Assessment highlights

Review your current Microsoft suite, deployment, and licensing

Review third-party security tools in use for supported usage with Copilot for Security

Policy and Governance Review

Identify Copilot for Security users and define appropriate roles

Summary of findings and next steps

Security teams fight an asymmetric battle against well-resourced, organized, and sophisticated attackers. To protect their organizations, security practitioners must respond to threats that are often hidden among noise. Compounding this challenge is a global shortage of skilled security professionals.

## Empower your security team with a Copilot for Security Proof of Concept

Copilot for Security is the first generative AI security product to help defend organizations at the speed and scale of AI. Since Microsoft's initial announcement, the interest and excitement has been unprecedented. Copilot for Security combines the most advanced GPT4 model from OpenAI with Microsoft-developed AI orchestration, and is powered by Microsoft Security's unique expertise, global threat intelligence and comprehensive security products.

In this 3-week engagement, we'll complete a readiness assessment of your organization and provision Copilot for Security – for your team to quickly respond to threats, and complete configuration tasks within the Microsoft Security stack and supported third party integrations.

## Why you should engage Interlink

This engagement is designed to help you understand Copilot for Security and its benefit for your team and business. We will also discuss adoption and change management to help your team adopt and adjust to Copilot for Security. Phase II of the proof of concept will:

Provision necessary Azure subscriptions, configure/update role-based access control, provision Copilot for Security SCUs

Copilot for Security 101 Workshop – overview of usage and options

Copilot for Security Prompting Workshop – library of common prompts and guidance on prompt management

Recommendations on

- Incident Management
- Threat Hunting
- Drafting and Presenting Information
- Improving Documentation
